

GREENLANDS LANDSCAPE SUPPLY

Press Release May 2007

Greenlands is pleased to announce that our compost is now listed as “approved for use in organic production” by OMRI, the Organic Materials Review Institute.

Attention to quality has always been the goal at Greenlands. “Although not the biggest facility in the state, we have made a strong effort to fill a niche and produce the highest quality product.” Matt Stern, Greenlands Manager. Our many vineyard, agricultural and landscape customers have long stood behind the benefits of our premium compost, using it as a soil conditioner, soil builder and decorative top dressing.

As farming practices change, we have changed too. Our decision to use a listing agency comes in response to the needs of local growers who are producing their crops using organic and sustainable practices. These growers enjoy using our compost and now use it with the added assurance of the OMRI listing.

Greenlands compost has not changed, we are still producing the same premium product that we have always made. The OMRI listing should only help to answer questions about quality testing and safety as well as the high standards of our production methods.

Please check out our sales yard for more information or call me at 503-474-4861.

For questions about OMRI and their certification criteria visit their website at www.omri.org
